End-Term Examination
(CBCS)(SUBJECTIVE TYPE)(OffLine)
Course Name:<BTech>, Semester:<8th>
(May, 2024)

Subject Code:BAI-404	Subject: SOCIAL MEDIA ANALYTICS
Time :3 Hours	Maximum Marks :60
Note:Q. 1 is compulsory. Attempt one question each from the Units I, II, III & IV.	

Q1		(2.5*8=20)	
	(a) Define Social Media Analytics (SMA) and explain its significance in today's digital landscape.		
	(b) Describe how social network and web data are analyzed using graphs and matrices. Provide examples of basic measures used for individuals and networks.		
	(c) Explain how online surveys are designed, deployed, and analyzed to gather insights into user preferences and behaviors in web analytics and user feedback collection		
	(d) Explain the concept of random graphs and their role in modeling network evolution.		
	(e) Describe the process of planning and executing social campaigns on Facebook with examples.		
	(f) Describe the process of setting up Google Analytics for a website. Explain how businesses can use Google Analytics to gain insights into website traffic, user demographics, and behavior patterns with examples		
	(g) Explain the role of game analytics in the gaming industry. Discuss how game analytics techniques such as player profiling and behavior analysis used for game analytics.		
	(h) Explain the roles and the techniques for data cleaning, transformation, and aggregation using in Analytics.		
	UNIT-I		
Q2	Explore the various areas where SMA can be applied to derive insights and drive business outcomes. Provide detailed examples of SMA applications in marketing, customer service, product development, and crisis management.	(10)	
Q3	Examine the challenges and opportunities associated with analyzing social network data. Discuss how factors such as data quality, scale, and privacy impact the analysis process, and propose strategies for overcoming these challenges.	(10)	
	UNIT-II		
Q4	Define link analysis and its significance in understanding relationships within networks. Provide examples of how link analysis is used in social media analytics to uncover patterns and connections between entities.	(10)	
Q5	Explain the process of web crawling and indexing in data collection for web analytics. Provide examples of how web crawling is used to gather information from websites and how indexing organizes this data for searchability.	(10)	
	UNIT-III		
Q6	Evaluate the role of Facebook Analytics and other web analytics tools in informing marketing strategies and decision-making for businesses. Discuss the benefits and limitations of using these tools and propose strategies for	(10)	

	maximizing their effectiveness.		
Q7	Define network analysis in the context of social media platforms like LinkedIn, Instagram, YouTube, and Twitter. Explain how network analysis tools can be used to identify influencers, analyze audience demographics, and track engagement metrics.	(10)	
	UNIT-IV		
Q8	Explain the principles of data visualization. Discuss different types of charts, graphs, and dashboards used for visualizing data. Provide examples of effective data visualizations and their impact on decision-making.	(10)	
Q9	Explain the concept of link prediction in network analysis. Discuss algorithms and techniques used to predict future connections or relationships between nodes in a network. Provide examples of real-world applications of link prediction in social networks and recommendation systems.	(10)
