(Please write your Enrollment Number) Enrollment No. 06601192020

MID-TERM EXAMINATION
(Course Name : B. Tech. CSE-AI) (Semester : 8th)
(March, 2024) OFF LINE mode

Subject Code: BAI-404	Subject: Social Media Analytics
Time : 1 ½Hours	Maximum Marks : 30
Note: Q. 1 is compulsory.	

Q1		(2.5*4)	
	(a) Explain the role of graphs and matrices in analyzing social network data. Provide examples of basic measures used for individuals and networks.	UNIT-1	
	(b) Explain the concept of nodes, ties, and influencers in the context of social networks?	UNIT-1	
	(c) What is link analysis in the context of social media analytics, and how does it help in understanding relationships between entities within a network?	UNIT-2	
	(d) What is clickstream analysis, and how does it provide insights into user behavior on websites? Provide examples of metrics commonly analyzed through clickstream data.	UNIT-2	
Q2	(Attempt any Two Parts) UNIT-1		(5,5)
	(a) In what ways does Social Media Analytics (SMA) transform raw social media data into actionable insights. How does this process impact decision-making in organizations?		
	(b) Evaluate the future trends and advancements in Social Media Analytics. How do emerging technologies such as artificial intelligence and machine learning influence the development and application of SMA methodologies?		
	(c) What is the significance of information visualization techniques in SMA. How do visual representations such as node-link diagrams and heatmaps facilitate the exploration and interpretation of complex social media data?		
Q3	(Attempt any Two Parts) UNIT-2		(5,5)
	(a) Discuss the role of online surveys in web analytics. How are online surveys designed, deployed, and analyzed to gather user feedback and insights? Provide examples of how online surveys are used to optimize website performance and user experience.		
	(b) Provide an overview of natural language processing (NLP) techniques for micro-text analysis in social media analytics. How are NLP algorithms used to extract insights from short-form text data, such as social media posts and comments?		
	(c) Discuss the principles of random graphs and their significance in modeling network evolution. How do random graphs help in understanding the structure and dynamics of social networks over time? Provide real-world examples illustrating the application of random graphs in social media analytics.
