Enrollment No. 04801172022

3

End Term Examination
B.Tech, 6th Semester
(May, 2025)

Subject Code: BAI 308	
Time :3 Hours	Subject: Cloud Computing
	Maximum Marks :60

Note: Q1 is compulsory. Attempt one question each from the Units I, II, III & IV.

Q1			
	a) How does cloud computing overcome the limitations of grid computing?	2.5*8	CO Mapping
	b) Discuss the challenges of cloud computing that are still need to be addressed.		CO1
	c) List the standard protocols used in web services.		CO1
	d) What is PaaS in cloud computing? Explain with example.		CO2
	e) List the steps involved in the Virtual Machine provisioning process.		CO2
	f) Discuss the properties of a Type 2 hypervisor.		CO3
	g) Explain the blockchain structure that makes it secure.		CO3
	h) Discuss the security concerns at different levels of the cloud computing environment.		CO4
	UNIT I		CO4
Q2	How have computing paradigms evolved up to the point of cloud computing, and what are the key milestones in this evolution?	(10)	CO1
Q3	Explain the deployment models of cloud computing in detail.	(10)	CO1
	UNIT II		
Q4	What is the need for cloud migration? Discuss the steps involved in the cloud migration model.	(3+7)	CO2
Q5	What is dynamic scalability? Discuss the types of dynamic scaling with appropriate diagrams.	(4+6)	CO2
	UNIT III		
Q6	In the context of modern programmable networks, how does Software Defined Networking (SDN) redefine traditional network control and forwarding mechanisms? Illustrate your explanation with a detailed architectural diagram.	(10)	CO3
Q7	How does Network Function Virtualization (NFV) transform traditional network architecture in modern cloud-based infrastructures?	(10)	CO3
	UNIT IV		
Q8	Explain what a smart contract is and how it works. Provide a demonstration with sample code.	(3+3+4)	CO4
Q9	In what ways do containers differ from traditional virtualization in terms of resource isolation, management, and scalability?	(10)	CO4
